Minimun requires

- Dual core computer processing unit of 2 Ghz (server).
- 2GB memory ram.
- 2 USB ports 2.0.
- HDD of 320 GB.
- Broadband internet connection.
- Windows ® XP 32/64 bit OS.
- BBDD MySQL® 5.
- Geographic information system of Google Earth®.

Installation

- Simple installation on a licensed server.
- Simple installation in workstation.
- Upgradable from the Busmatick.
- Maintenance and tele-assitance agreement.

The **BtkOffice** application suite is the specially designed plug-in for connecting Busmatick vendors with your office. If you have online connectivity, you will be able to know at all times the location of your fleet and employees, in addition to contacting them through integrated messaging. Information from sales is automatically sent to multiple formats for further processing.

The system of initialization and recharge of contactless cards is responsible for maintaining the data of all users, taking their photograph and printing directly on card printers. Reduces the possibility of fraud by displaying the user's photo at the time of reloading the card.

In its ideal configuration there must be a server computer that will run the BtkServer, BtkCollector and MySQL services, and other workstation computers that can remotely connect to the server.
