

BusApp Driver

Installed on the drivers' mobile devices, they will allow us to have control of the entire active fleet, as well as display the relevant information to the driver to improve their circulation and obtain sales data.

Application designed for any device, whether Smartphone or Tablet, that works under an operating system Android 4.2 or higher.

Central software

This application allows to connect to the control center of BtkOffice any device which is registered in the system. By this way we will have the fleet control of the drivers who operate in our flote.

Communications

- It can operate 'off line' showing relevant information to the driver, but to enjoy all the functionalities is necessary to have a data plan.
- To have high precisión positioning, the device needs **GPS**.
- If the device has **NFC** technology, we can handle contactless cards.

General characteristics

- The device give you information about the speed, the ubication, the course, the date, the hour, etc...
- Send and receive messages from/to the application to BtkMonitor.
- Thanks to this connection to the central, we can have driving statistics, link drivers to embedded system and report, for exmple, the number of passengers on board.
- If we have information of the theoretical schedules can inform the punctuality of the service.
